The hands need not be washed with soap or detergent prior to the use of such preparations. However, the hands must be rinsed with potable water after the use of the product and before handling food.

Hand sanitizing products (Category Code E3): Products manufactured from those solutions described in CFR Title 21, Section 178.1010, which are applicable for the purpose may be used to sanitize the hands of employees handling food products without a subsequent rinse provided they are germicidally equivalent to 50 ppm available chlorine. These sanitizing solutions may be used only after thoroughly washing hands with soap or detergent and water, followed by rinsing with potable water. In many instances, these hand sanitizers may be injected directly into wash/rinse water.

SLIM JIM® CONTAINERS

80% EASIER BAG REMOVAL
WITH BUILT IN VENTING CHANNELS

The Slim Jim® container is designed with four built-in venting channels that create airflow throughout the container. This air circulation reduces the vacuum effect that occurs when lifting out liners in traditional containers. By reducing the pull force required to lift out liners by up to 80%, the Slim Jim® container improves productivity and reduces the risk of injury.

COLOR-CODED CLEANING

Cleaning professionals today use a color-coded cleaning system, using color-coded buckets, handles and mops to help reduce cross-contamination. Additionally, they can be organized by function, department or building area, making it easier to track usage.

RECOMMENDED USAGE:

Color-coding systems can vary by vertical and application; however, Rubbermaid Commercial Products, in alignment with industry experts, recommends the following system:

- **Yellow:** Back-of-House Cleaning
- **Brown:** Back-of-House Cleaning
- **Red:** High-Risk Restroom Areas
- **Blue:** General-Purpose Cleaning
- **Green:** General Food Processing, Serving and Bar Areas
- **Black:** Front-of-House Cleaning

MOP CONSTRUCTION DEFINED

YARN TYPE

Mop yarn type is the most impactful driver of mop launderability, absorbency, durability, and release. Understanding mop yarn type helps drive proper mop selection for varying applications.

MICROFIBER TUBE
Most durable, stands up to abrasive cleaning and heavy-duty scrubbing with excellent absorbency.

MICROFIBER
Highly durable, non-abrasive general-purpose mop.

BLEND SHRINKLESS®
General-purpose mopping. Pre-laundered for reduced shrinking. Longer-lasting and less linting compared to cotton. Highly absorbent/no break-in required.

BLEND
General-purpose mopping. Longer-lasting and less linting compared to cotton. Highly absorbent/no break-in required.

COTTON
General-purpose mopping. Least expensive yarn option. Reliable liquid absorption. Requires break-in, dries slowly, may lint.

NON-WOVEN
General-purpose mopping. Least expensive wet mop option. Highly absorbent. Requires no break-in and delivers reduced linting versus cotton. Not launderable.

FINISH
Designed to provide smooth and even release of chemical and floor finish. Less linting compared to rayon.

RAYON
General-purpose mopping. Reliable liquid absorption. Highest quality of yarn. Resists mildew growth, extending mop life and white appearance.

SYNTHETIC BLEND
All-synthetic mop yarns resist abrasive floor surfaces.

MAINTENANCE
Made of woven rayon/polyester fabric that will not fray or lint. For use in Class 10,000 and higher industrial applications.

ROUGH-FLOOR
Knitted fleece cotton/polyester blend yarn for highly abrasive surfaces. High absorbency.

HEADBAND TYPE

Headbands drive mop handle selection and can be made of cloth or mesh. Mesh headbands dry faster and can sometimes be used as a scrubbing tool due to the abrasive nature of the material.

1" HEADBAND
Most optimal with side-gate Invader® Wet Mop Handle.

5" HEADBAND
Most optimal with clamp-style Gripper® Wet Mop Handle.

UNIVERSAL HEADBAND
Compatible with Gripper® and Invader® Wet Mop Handles.

TAILBAND TYPE

Tailbands prevent tangling and improve floor coverage for more efficient mopping. Not all mops have tailbands.

WOVEN TAILBAND
Allows for commercial laundering. Most expensive type of tailband.

YARN TAILBAND
Requires handwashing or limited residential launderings. Economical tailband choice.

NO TAILBAND
Requires handwashing only.

END TYPE

Mop ends can be looped or cut, and ultimately impact mop launderability, fraying, linting, and unraveling.

LOOPED END
Reduces fraying, linting, and unraveling. Allows for laundering, extending lifetime. Generally more expensive.

CUT END
Economical and practical general-purpose mop. Ends may fray and unravel. Does not incorporate tailband, covering less area. Disposable or hand wash.

Dust Mopping

There are several important factors to consider when choosing a dust mop. Use the guidelines on the following pages to choose the best dust mop for your floor care needs.

General Dust Mopping

Choose mops with high-dust pickup and durability. If laundering is available, launderable mops will be the most economical choice. Microfiber looped-end and twisted-loop mop heads with reinforced stitching and slip-on/slide-off backing offer the best performance and launderability.

Mop Construction Features

Twisted-Loops
Highly effective at capturing dust and dirt. Premium Twisted-Loops are less prone to snags, frays, and unraveling during cleaning and laundering.
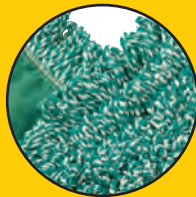

Looped Ends
Reduce fraying and deploying for better durability and longer product life. More effective than cut-end mops.

Cut Ends
Economical construction for general-purpose dusting.
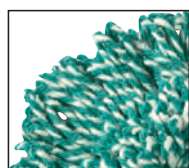

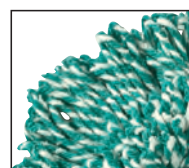

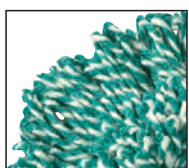

Reinforced Stitching
Reinforced, double-needle stitching at key "wear" points increases product life.

Backing Design
Slip-on/slide-off backing allows quick, easy setup or breakdown for standard mop frames.

Launderability

The launderability of a mop is based on the number of commercial washing and drying cycles it can withstand before the construction of the mop is degraded or the performance declines. Microfiber, synthetic, and blended fiber mops have the highest levels of launderability.

MICROFIBER

BLEND

SYNTHETIC

Durability

The durability of a mop is a measure of how long it will perform before needing to be replaced. Microfiber, synthetic, and blended fiber mops are the most durable.

MICROFIBER

BLEND

SYNTHETIC

Dust Pickup

Dust pickup is the ability of a mop to remove dust and dirt from the floor surface. Microfiber, blended fiber, and synthetic mops have the highest degree of dust pickup.

HOUSEKEEPING CART

MOVE HEAVY LOADS WITH LESS EFFORT

Workers' compensation data from California shows that hotel housekeepers are ~2x as likely to experience an injury from pushing & pulling tasks relative to all other occupations.*

REDUCE STRAIN

The battery-powered cart virtually eliminates the need for manual force when transporting heavy loads in both forward and reverse.

REDUCE DOWNTIME

Facility custodians and housekeepers can complete an average shift using one fully-charged battery.**

Dual onboard battery compartments provide back-up power without having to plug in the entire cart and truck, minimizing costly workflow disruptions due to battery switch outs.

MAXIMIZE VERSATILITY

The retrofit motorized kits are compatible with new and existing RCP housekeeping carts***, providing a range of options to meet facility needs.

*"Workplace Injuries in Hotel Housekeeping in California" – Department of Industrial Relations (2016)

**Based on an average shift of 8 hours; assumes cart is not continuously running. Continuous runtime is approximately 2 hours.

***Compatible carts include FG6189/90/91/92, FG9T1900, 1969596

Spills happen unexpectedly, creating hazards for patrons and staff which need to be cleaned up as quickly as possible to avoid injuries. Using a string mop and bucket can be time- consuming and leaves the floor wet. Over-the-Spill Pads make it easier to cover and absorb spills while simultaneously alerting pedestrians to potential slip-and-fall hazards.

20%
OF **ALL WORKPLACE INJURIES** INVOLVING DAYS AWAY FROM WORK ARE DUE TO **SLIPS, TRIPS AND FALLS**.[1]

$48,575
IS THE AVERAGE **SLIP/FALL INJURY COST** IN WORKERS' COMPENSATION EXPENSES.[2]

MOTORIZED TILT TRUCK SOLUTIONS

MOVE HEAVY LOADS WITH LESS EFFORT

Spending >50% of the day on pushing & pulling tasks increases injury risk by ~5x.[1] The Motorized Rotomolded Tilt Truck is ideal for users who want the benefits of using cordless motorized power for moving heavy loads and reducing user strain.

1. MiekeKoehoorn , Aleck Ostry , Shahadut Hossain & Judy Village (2011) Injury risk associated with physical demands and school environment characteristics among a cohort of custodial workers, Ergonomics, 54:8, 767-775, DOI: 10.1080/00140139.2011.592603 Industrial Safety & Occupational Health Markets 5th Edition.

REDUCE STRAIN

The battery-powered kit virtually eliminates the need for manual force, reducing strain experienced by users when pushing heavy loads up to 1,000 lbs.

SAVE TIME

Substituting manual power for battery power helps regain time lost over the course of a shift due to cumulative fatigue.

DECREASE DOWNTIME

Dual onboard battery compartments provide back-up power without having to plug in the entire truck, minimizing costly workflow disruptions due to battery switch outs.

CASTERS TO MEET YOUR NEEDS

Rubbermaid's best-in-class heavy-duty casters have been specially chosen for each of our products to meet your most demanding environments.

THERMOPLASTIC RUBBER

TPR casters absorb shock, provide floor surface protection, and quiet operation. Chemical- and water-resistant.

POLYOLEFIN

Hard-tread polyolefin casters roll easier than soft tread casters. Nonmarking, impact- and chemical-resistant casters won't flat-spot under static loads or pick up metal shavings, nails, and other debris.

PNEUMATIC

Pneumatic casters provide a cushioned and quiet ride for fragile loads, making them ideal for rough and uneven surfaces, inside and out.

WHAT SETS RCP FRAGRANCES APART

Traditional air fresheners only camouflage malodors; all of RCP's fragrance options have odor neutralizer, which attacks and effectively eliminates unavoidable odors in the washroom. Thus, completing two jobs in one – removing odors and creating fresh-smelling environments.

ODOR NEUTRALIZER

Locks onto malodor molecules to neutralize the odor.

MALODOR

ODOR NEUTRALIZER TECHNOLOGY

ABSORBS INTO MALODOR

TRANSFORMS MALODOR INTO NEUTRAL BASE

CREATES A FRESH-SMELLING AND HYGIENIC ENVIRONMENT
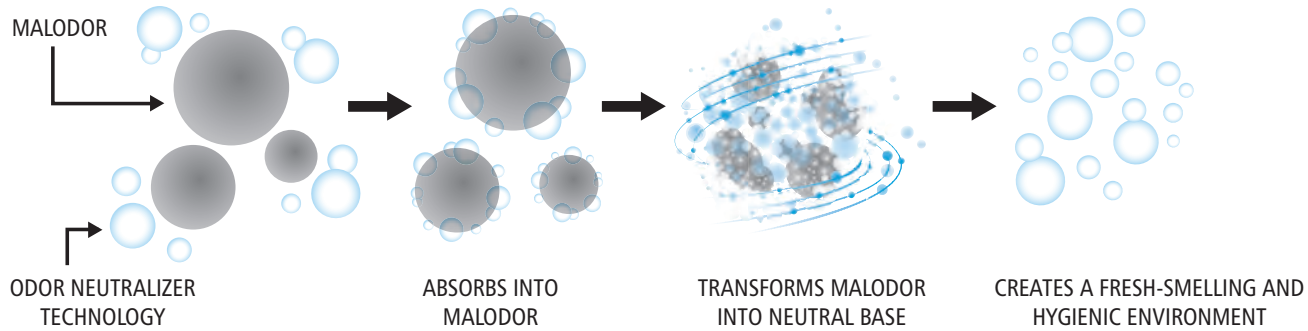

FRAGRANCE-FREE ODOR NEUTRALIZER

RCP also offers a Pure odor neutralizer in our passive line for environments where odor removal is desired, but fragrance is not. This option is a blend of natural extracts and purified water that attracts, captures, and neutralizes malodors.
